

Introducing SKEDCO Micro Hauler

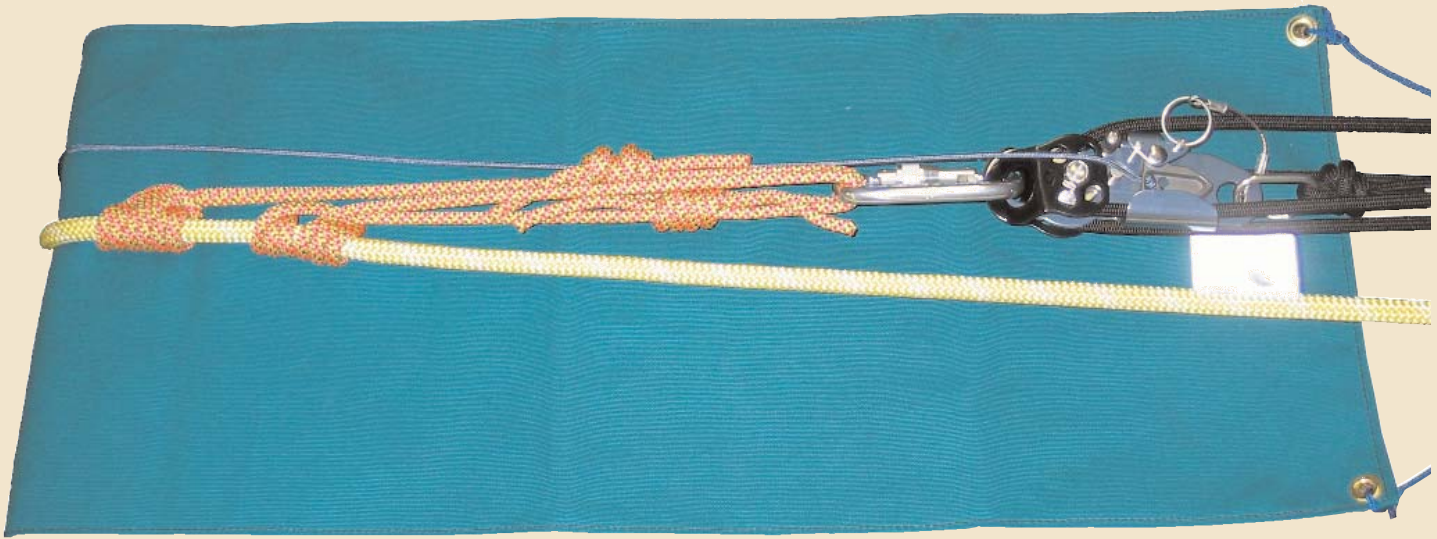

NEW

This is a miniature Rescue Hauler that measures only six inches in length by 2 inches in width. It features one inch pulley sheaves.

When used with its matching double pulley, it gives you from 1:1 to 5:1 mechanical advantage. They can be stored pre-rigged in a small bag ready for immediate deployment.

Unrigged it will fit in a pocket or small pouch. The Micro Hauler and pulley together weigh only 12.5 ounces.

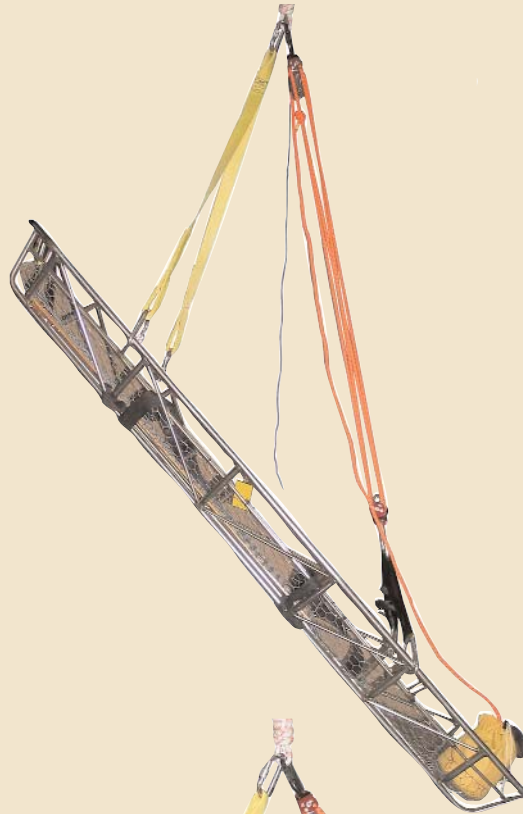

It is already being used (pre-rigged) in military applications.

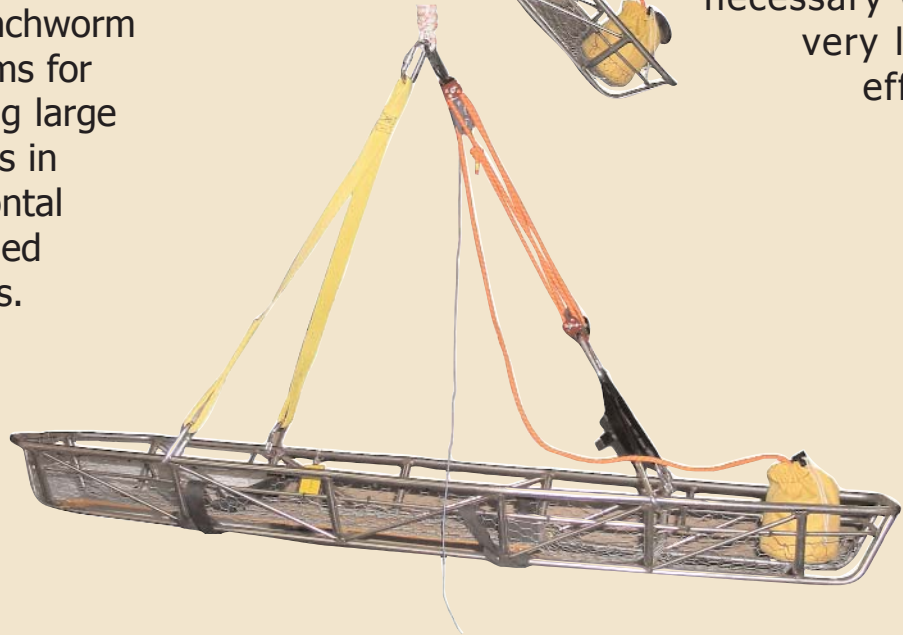

Piggy back systems allow attachment to the victim's rope to raise him to safety.

Micro Hauler is also used for pick-offs, line transfers and inchworm systems for moving large victims in horizontal confined spaces.

When attached to the foot end of basket litters, it is used to take the litter from horizontal position to completely vertical and back to horizontal as often as necessary with very little effort.

These are just a few of the many uses for a Micro Hauler. Its uses are only limited by the user's imagination.

Micro Hauler's compact size and 7,000 pound break strength makes it an absolute must for any rescue kit.
